

Discovery workspace: quick guide

For Monica. Our shared tracker for the MIT Sloan research study on how banks and insurers govern AI agents.

1 Sign in

Open

riteshmsrivastava-pixel.github.io/laionel-discovery

and sign in with **monica31@mit.edu** and the password you set. You stay signed in on that browser.

Sign out is at the bottom of the left menu.

2 It saves by itself

Every change saves automatically and shows up for Ritesh straight away, and his for you. There is no save-all button and nothing to refresh. Only the two of us can see the data.

3 What each tab is for

Plan	The four-week plan, counts, and the week-by-week task list. Tick a task when it is done.
Companies	The 50 target firms, scored 0 to 8. Click a row to edit, or Add company .
People	Everyone we plan to contact, their owner (you or Ritesh) and status. Blank names are role slots to fill from LinkedIn.
Messages	A ready-to-send LinkedIn invite note (under 200 characters) and a longer message for people in your network, for every person. Filter to Monica's list .
Script	The interview questions. Run an interview gives a timer and note-taking view during the call.
Interviews	One record per conversation: notes, quotes, and the H1 to H8 tags.
Synthesis	Counts that update from the interviews. Nothing to edit here.
Outreach	Channels, LinkedIn search strings and general templates.

4 Editing anything

- Click any row, task or question to open the edit panel on the right.
- Change the fields, then press **Save**. **Delete** is in the same panel.
- Use the **Add** buttons at the top of each tab for new items.

5 Sending outreach

- Messages tab, filter **Monica's list** and **Not contacted yet**.
- Fill in [Name] on role slots, tweak the text, then **Save edits**.
- **Copy note** into LinkedIn's "Add a note", or **Copy message** for people you know.
- Press **Mark as contacted** so we never message the same person twice.

6 After each interview

Within 24 hours, open **Interviews** and press **Log an interview** (or save from **Run an interview**). Pick the person, paste your notes and best verbatim quotes, and tag each hypothesis: click once for evidence **for**, twice for **against**. The person's status changes to Done automatically.

Framing reminder. Every message and call is MIT research: answers stay anonymous, there is nothing to sell, and participants get the findings. Do not propose a solution during the call; ask for dates, systems and real examples.
